

Off the Grid Map

Follow these guidelines to create a grid.

1. Using painters tape, create an 8x5 grid on the floor. *(If you will be outdoors you could use sidewalk chalk.)*
2. If you will use this predetermined grid, keep a copy with you as participants move through the grid.
3. Track where participants are according to this paper copy, and make a buzzer sound if participants step in quicksand.

Off the Grid, continued

To make your own safe pathway:

- 1. Mark an "x" in each row of the blank grid below to indicate one to two "safe spaces."
- 2. Each safe square must be somehow connected to another safe square, meaning above, below, beside or diagonal to the next safe square.
